# Our approach

▲□▶ ▲圖▶ ▲臣▶ ★臣▶ ―臣 …の�?

Function  $f_i:[0,1] \to \mathbb{R}$  are from  $\mathcal{F}$ , the class of absolutely continuous functions.

Assume that one observes

$$f_i \circ \gamma_i(t) + a_i, \quad 0 \leq t \leq 1, \quad i = 1, \ldots, n,$$

where  $\gamma_i \in \Gamma := \{\gamma : [0,1] \rightarrow [0,1], \text{ increasing, smooth and } \gamma(0) = 0, \gamma(1) = 1\}$ . (Group with composition)

Function  $f_i:[0,1] \to \mathbb{R}$  are from  $\mathcal{F}$ , the class of absolutely continuous functions.

Assume that one observes

$$f_i \circ \gamma_i(t) + a_i, \quad 0 \leq t \leq 1, \quad i = 1, \dots, n,$$

where  $\gamma_i \in \Gamma := \{\gamma : [0,1] \to [0,1], \text{ increasing, smooth and } \gamma(0) = 0, \gamma(1) = 1\}$ . (Group with composition)

Need to consider equivalence classes:

$$[f_i] := \{f_i \circ \gamma | \gamma \in \Gamma\}, \quad i = 1, \dots, n.$$

Amplitude:

▶ Transform:  $f \mapsto q := \operatorname{sign}(f')\sqrt{|f'|}$  with  $(q, \gamma) = q \circ \gamma \sqrt{\gamma'}$ .

Amplitude:

• Transform:  $f \mapsto q := \operatorname{sign}(f')\sqrt{|f'|}$  with  $(q, \gamma) = q \circ \gamma \sqrt{\gamma'}$ .

• 
$$||(q_1, \gamma) - (q_2, \gamma)|| = ||q_1 - q_2||$$

Amplitude:

- ▶ Transform:  $f \mapsto q := \operatorname{sign}(f')\sqrt{|f'|}$  with  $(q, \gamma) = q \circ \gamma \sqrt{\gamma'}$ .
- $||(q_1, \gamma) (q_2, \gamma)|| = ||q_1 q_2||$
- $D_{amp}([f_1], [f_2]) = \inf_{\gamma \in \Gamma} ||q_1 (q_2, \gamma)||.$

<sup>1</sup>Registration of Functional Data Using Fisher-Rao Metric. A. Srivastava, W. Wu, S. Kurtek, E. Klassen and J. S. Marron. arXiv: 1103.3817 □ → ( ()) → ( ()) → ( ()) → ( )) → ( ()) → ( ()) → ( )) → ( ()) →

Amplitude:

▶ Transform:  $f \mapsto q := \operatorname{sign}(f')\sqrt{|f'|}$  with  $(q, \gamma) = q \circ \gamma \sqrt{\gamma'}$ .

• 
$$||(q_1, \gamma) - (q_2, \gamma)|| = ||q_1 - q_2||$$

•  $D_{amp}([f_1], [f_2]) = \inf_{\gamma \in \Gamma} ||q_1 - (q_2, \gamma)||.$ 

#### Phase Space:

• Transform:  $\gamma \mapsto \psi := \sqrt{\gamma'} \in S^{\infty}$  since  $\int_{[0,1]} \psi^2(t) dt = 1$ .

Amplitude:

▶ Transform:  $f \mapsto q := \operatorname{sign}(f')\sqrt{|f'|}$  with  $(q, \gamma) = q \circ \gamma \sqrt{\gamma'}$ .

• 
$$||(q_1, \gamma) - (q_2, \gamma)|| = ||q_1 - q_2||$$

•  $D_{amp}([f_1], [f_2]) = \inf_{\gamma \in \Gamma} ||q_1 - (q_2, \gamma)||.$ 

#### Phase Space:

- Transform:  $\gamma \mapsto \psi := \sqrt{\gamma'} \in S^{\infty}$  since  $\int_{[0,1]} \psi^2(t) dt = 1$ .
- $S^{\infty}$  is nonlinear manifold but well-understood.

• 
$$D_{\text{phase}}(\gamma_1, \gamma_2) = \cos^{-1}(\langle \psi_1, \psi_2 \rangle).$$

# Boxplot: ingredients

- Median. (Fréchet median on  $\mathcal{F}/\Gamma$  and
- Upper and Lower quartiles. (Ordering based on distance and direction from Fréchet median).
- IQR

*S*<sup>∞</sup>)

- Outlier cutoffs.
- Extremes.

・ロト ・ 日 ・ ・ 日 ・ ・ 日 ・ ・ つ へ ()

• Compute 
$$q_i = \operatorname{sign}(f')\sqrt{|f'_i|}$$
.

- Compute  $q_i = \operatorname{sign}(f')\sqrt{|f'_i|}$ .
- Compute median (equivalence class):

$$[f_m] := \operatorname*{argmin}_{[f] \in \mathcal{F}/\Gamma} \sum_{i=1}^n D_{\operatorname{amp}}([f_i], [f]) \quad (\mathsf{Gradient-based algorithm with } q_i).$$

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● ● ●

▶ Pick one element  $f_m$  from  $[f_m]$  and  $q_m$ —this is the median.

- Compute  $q_i = \operatorname{sign}(f')\sqrt{|f'_i|}$ .
- Compute median (equivalence class):

$$[f_m] := \underset{[f] \in \mathcal{F}/\Gamma}{\operatorname{argmin}} \sum_{i=1}^n D_{\operatorname{amp}}([f_i], [f]) \quad (\mathsf{Gradient-based algorithm with } q_i).$$

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● ● ●

- ▶ Pick one element  $f_m$  from  $[f_m]$  and  $q_m$ —this is the median.
- Obtain  $\{q_{(1)}, q_{(2)}, \ldots, q_{(\lceil n/2 \rceil)}\}$  based on distance from  $q_m$ .

Upper and lower amplitude 'quartiles':

Choose two elements from  $\{q_{(1)}, q_{(2)}, \ldots, q_{(\lceil n/2 \rceil)}\}$  such that:

Sum of their distances from the median is the largest.

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● ● ●

► They lie on opposite 'sides' of the median.

Upper and lower amplitude 'quartiles':

$$(q_{Q_1}, q_{Q_3}) := \operatorname{argmax} \text{ of } (a, b) \text{ over } \{q_{(1)}, q_{(2)}, \dots, q_{(\lceil n/2 \rceil)}\}$$
$$(1 - \lambda) \left[ \frac{\|a - q_m\|}{\max_i \|q_{(i)} - q_m\|} + \frac{\|b - q_m\|}{\max_i \|q_{(i)} - q_m\|} \right]$$
$$- \lambda \left[ \left\langle \frac{\|a - q_m\|}{\|a - q_m\|}, \frac{\|b - q_m\|}{\|b - q_m\|} \right\rangle + 1 \right]$$

<□▶ <□▶ < □▶ < □▶ < □▶ < □ > ○ < ○

Upper and lower amplitude 'quartiles':

- ► Inter-quartile range:  $IQR = ||q_{Q_1} q_m|| + ||q_{Q_3} q_m||$ .
- Amplitude outlier cut-offs:

$$C1 := q_{Q_1} + \kappa \times IQR \times \frac{q_{Q_1} - q_m}{\|q_{Q_1} - q_m\|}$$
$$C2 := q_{Q_3} + \kappa \times IQR \times \frac{q_{Q_3} - q_m}{\|q_{Q_3} - q_m\|}$$

▲□▶ ▲圖▶ ▲臣▶ ★臣▶ ―臣 …の�?

- Inter-quartile range:  $IQR = ||q_{Q_1} q_m|| + ||q_{Q_3} q_m||$ .
- Amplitude outlier cut-offs:

$$C1 := q_{Q_1} + \kappa \times IQR \times \frac{q_{Q_1} - q_m}{\|q_{Q_1} - q_m\|}$$
$$C2 := q_{Q_3} + \kappa \times IQR \times \frac{q_{Q_3} - q_m}{\|q_{Q_3} - q_m\|}$$

 $f_{new}$  is an outlier if  $||q_{new} - q_m|| > \max\{||C_1 - q_m||, ||C_2 - q_m||\}.$
